## **Building resilient heartsafe communities**

Trained through Heartsafe NWE, Anna responds when her phone alerts her to a cardiac arrest nearby. She brings the nearest automated external defibrillator (AED) and with another community first responder starts cardiopulmonary resuscitation (CPR) until the ambulance takes over.

Anna returns home. But the story does not end there. Heartsafe 2.0 supports responders like Anna after each intervention. A post-resuscitation support platform connects community first responders, survivors, families and emergency medical services, helping build resilient responders and stronger heartsafe communities.
